DAVIT GYULINYAN

FRONTEND DEVELOPER

davitgyulinyan-resume.dev

MY SKILLS

HTML, CSS, and Tailwind CSS form the basis of my skills. I'm skilled in JavaScript and React JS, have experience with Git for version control, and familiar with Figma for UI design. My understanding of Node JS and Express JS is at a basic level.

In terms of database management, I've used PostgreSQL and MongoDB. These skills collectively enable me to develop and design web applications effectively.

I always looking to gain new skills.

Languages

Russian (Advanced): Fluent in Russian with advanced proficiency in speaking and comprehension.

English (B1, Improving): Currently enhancing English language skills with a focus on fluency.

EXPERIENCE

Phenix Academy

Coding tutor 15.01.2022 - Present

For the last years at Phenix Corporation, I've worked as a Coding tutor. I've focused on helping students understand the basics of web development, like HTML, CSS, responsive design, JavaScript. I'm good at making complicated ideas simple, creating a fun learning environment, and making sure students learn the practical skills they need for web development. My job is about getting students excited about coding, helping them solve problems, and giving them confidence as they start learning about web development.

Always ready to share my knowledge

Hi Tutor

Frontend developer 05.04.2024 - Present

During my time on the Hi Tutor's Exam project, an examination platform, I worked as a frontend developer, building a modern web presence with React.js. Using React on the client side, I created responsive user interfaces, enhancing the online examination experience. I collaborated closely with various teams, translating design concepts into functional code and ensuring seamless integration of features.

Focus Design Studio's web page 03.12.2023 - present

I working on a website project for Focus Design Studio using Next.js for user-friendly design and server side rendering. This experience improved my skills in web development, especially in Next.js.

Test online store project, server side development 09.11.2023 - 17.11.2023

I used Node.js and Express.js to create a strong server, and PostgreSQL was the database. This project helped me practice backend development, making the server work, and managing the database. I added features like user authentication, handling products which improved my skills in the Node.js world. Doing this project not only made me better with these technologies but also gave me real experience in building websites that actually work.
